

Ikelite "Short-Port" Lens Adapter

i n s t r u c t i o n m a n u a l

#9306.78 Short Port 67mm Conversion Lens Adapter

9306.78 Short Port 67mm Adapter

Allows attaching Ikelite W-20 Wide Angle Conversion Lens #6420, Epoque, Type II Inon screw-on lenses, and macro lenses or diopters with 67mm threads. Includes larger size removable flash deflector.

Installing the Adapter and Deflector

1. Remove the Flash Deflector from the lens port adapter and install the wide-angle lens.
2. Loosen the three thumb screws so they do not protrude through the Lens Port Adapter.
3. Place the Lens Port Adapter over the camera housing port.
4. Snug down the three thumb screws evenly. **DO NOT** Over-tighten. The thumb screws should self-center into the port groove.
5. The deflector can now be installed to its proper position on the Lens Port Adapter. Deflector should block camera flash.

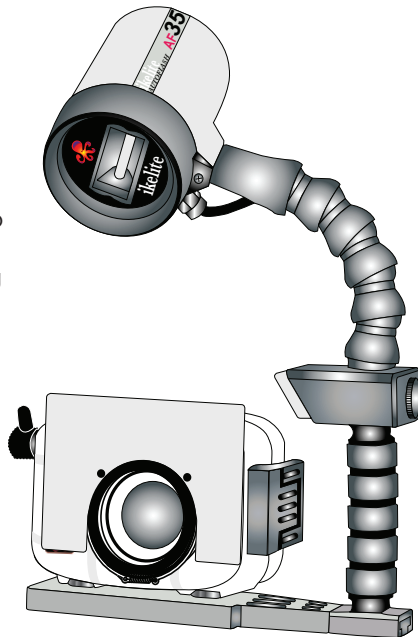

Notes:

- It is not necessary to remove the Adapter when removing the wide-angle lens underwater.
- To avoid losing the deflector, A small fishing line or string can be attached to the small deflector hole.
- The camera's built-in flash cannot be used to illuminate subjects underwater when the Wide-Angle Adapter and Wide-Angle Lens is installed.
- Vignetting can occur at widest angle camera lens setting with wide-angle conversion lenses. Zoom in to eliminate, or crop the image in post-processing. Slight picture edge softness in some situations is normal.
